

MU-Softmedia

IBMS Project

Screenshot taken from an active project

Project includes integrating 8 systems into a SCADA from diversified vendors for a building 2 decades of age.

Organization

Chairman:
Dato' Abdus Casim

Managing Director:
Mustaffa Kamal

Engineering Manager :
Ahmad Nizam

Software Engineer:
Adzillah

Project Engineer:
Ahmad Zafrullah

Engineer:
Firdauz

Senior Technician:
Johairi Kassimm

Technician:
Masnan Katim
Radzi Katim
Abu Hanip

INTEGRATED BUILDING MANAGEMENT SYSTEM (IBMS)

MU-SoftMedia Sdn Bhd

ALIGNED
WITH OUR
FOREFATHERS
VISION AND
PERCEPTION

IN THRIVING A NATION BLESSED WITH ADVANCED TECHNOLOGY, LEADING IN ECONOMY, WORLD LEADERS IN EDUCATION, SOCIAL WELL BEING AND PSYCHOLOGICAL BALANCE, **MU-SOFTMEDIA SDN BHD**, AN **MSC-STATUS COMPANY**, IS READY TO UPHOLD THE VISION AND MISSION THRU A MANAGEMENT SYSTEM THAT WOULD BE BENEFICIAL IN ACHIEVING SUCH GOALS. A PROMISING FUTURE FOR THE NATION AND UPCOMING GENERATION STARTS WITH COMFORT AND AUTOMATION IN EVERYDAY LIFESTYLE.

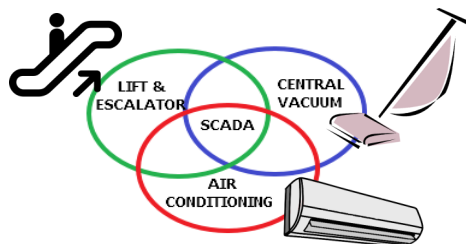

MU-SOFTMEDIA SDN BHD LED BY MR MUSTAFFA KAMAL B IBRAHIM, IS INVOLVED IN AN **INTEGRATED BUILDING MANAGEMENT SYSTEM (IBMS)** INSTALLED IN ONE OF THE TALLEST BUILDING IN THE NATION AND HENCE WITH SUCH AUTOMATION WOULD INVITE INVESTORS FROM ALL OVER THE WORLD INTO THE NATION WITH PROMISING LOOK EVEN FROM OUR SKYSCRAPERS.

Constraints

Integrated Building Management System (IBMS) is considered compulsory to high-rise building to automate every building management related tasks. It is almost impossible to manage a skyscraper with a limited man-force whilst reducing the cost.

A simple everyday task can be challenging and costly when it involves high-rise building. As an example, imagine cleaning and managing the maid on every floor in order to follow the schedule cleaning in a 70-storeys skyscraper. This alone would cost a fortune on the building management team. Hence, IBMS will be a great assistant in facilitating and managing these tedious tasks.

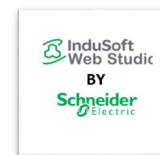

From a simple everyday task, to a more complex task, IBMS aims to monitor and control all devices involving high voltage, generators, pump and more diversified devices.

These devices requires a real time operation and some location of these devices are considered troublesome to attend. In leisure situation, it is not considered vital, but for a time-constraints situation, attending to these devices to simply disable a switch, its somewhat very irritating.

Plumbing System, High Voltage System, Low Voltage System, Generator Set System and more can be systematically sorted into one SCADA system which allows the user to automate each one of them in a real time.

IBMS, a Boon.

Integrated Building Management System (IBMS) is considered a boon to a high-rise building aiming to lead in technology and automation. Once automation is applied in what we called everyday tasks, the tasks which we saw as tedious is now would be pleasant, time reduction, and most importantly this solution will lessen the cost in building management.

Approach

Using technology from USA, and local manpower, MU-SoftMedia Sdn Bhd managed to integrate diversified systems through different communication protocol with thousands of i/o embedded into the system..
